

FUORIPISTA

BIKE

Bike interactive stationary bike

Distinctive and iconic, just as the name implies.

Discover the flawless blend of precision, interactivity, and avant-garde design with Fuoripista – the Interactive Stationary Bike developed in collaboration with Adriano Design by Elite.

Fuoripista comes equipped with an integrated power meter and virtual shifter, offering seamless compatibility with My E-Training and all other indoor cycling software in the market that electronically controls resistance. This ensures a truly comprehensive training experience, harmonizing with the most refined components that exemplify the excellence of “Made in Italy.”

Max load bearing		110 kg
Max slope simulated	60 rpm and exchange ratio 30-28	25 %
Resistance levels		16
Power meter accuracy		± 2,5 %
Power supply required		10 h

TECHNICAL SPECIFICATIONS

AN ELEGANTLY DESIGNED ITALIAN MASTERPIECE

Fuoripista emerges from a thoughtful exploration of indoor training tailored for home environments, courtesy of Adriano Design, a renowned design studio based in Turin. Collaborating with Elite, they have crafted this opulent smart bike.

Fuoripista was conceived to embody a stylistic vision that remains a distinctive feature of Italy's global reputation, seamlessly blending exclusive furnishings with our collection of technological innovations for indoor cycling. This is immediately evident in its refined structure, a harmonious fusion of top-notch, durable materials such as premium leather crafted with artisanal stitching, tempered glass, ash wood and aluminum.

HIGH QUALITY MATERIALS

This high-end smart bike stands on four robust legs crafted from sturdy ash wood, providing optimal support for intense sprints by ensuring maximum resistance to effort and mechanical stresses. The legs are adorned with premium genuine leather, boasting meticulous artisanal stitching for added elegance.

Featuring a large 50 cm / 15 kg flywheel made from multi-layered tempered glass, also handcrafted. This substantial flywheel ranks among the largest flywheels in indoor training, and is designed to enhance the cycling experience and offer a hyper-realistic pedaling simulation, particularly when generating high power output. The primary beam is enveloped in ash wood with a closed-pore walnut color finish, designed to withstand the sweat generated during rigorous training sessions. The resistance unit, controlled by felt brake pads, is housed in an aluminum alloy structure, shaping the height-adjustable seat post. Both the leather-covered handlebar and saddle can be adjusted for height using the front knob, providing a customizable and comfortable riding experience.

VIRTUAL SHIFTER, GUARANTEED POWER

The two levers, crafted from aluminum alloy, serve as an intuitive means to virtually shift gears and manage both front and rear gears, replicating the on-road cycling experience.

In Simulation or ERG mode, the right lever allows you to adjust the target power, while the left one lets you choose from up to 16 resistance levels. These levers maintain their functionality in standalone mode as well.

What transforms this luxurious device into a perfect and effective training tool is the integrated magnetic technology power meter. It ensures accurate power output readings with an accuracy of $\pm 2.5\%$.

TOTALLY INTERACTIVE

Similar to Elite's interactive smart trainers, Fuoripista seamlessly manages resistance through the use of double ANT+™ FE-C, PWR, S&C, and Bluetooth communication protocols. This smart bike effortlessly connects wirelessly to any app, software, computer, cycle computer, smartphone, and tablet on iOS, Android, MacOS, and Windows.

To enhance your experience, Fuoripista comes with a complimentary 36-month subscription to the Elite app My E-Training. This app allows you to personalize various training programs and workouts. Moreover, Fuoripista is compatible with popular indoor cycling platforms like Zwift, Rouvy, Bkool, Kinomap, and many others.

Equipped with a rechargeable lithium battery and a provided power supply, Fuoripista offers a remarkable 10 hours of autonomy. This ensures that you can always indulge in wire-free training sessions at your convenience.

USER-FRIENDLY TECHNOLOGY

The design of Fuoripista incorporates a monitor that allows you to seamlessly manage connectivity, modes, power output, brake calibration, and easily check the battery and gear shifter status in an intuitive and accessible manner. Additionally, within the central section of the console, an emergency button is situated. This button can be activated when necessary to directly intervene on the brake, putting the training session on standby for 10 seconds. Furthermore, the unit provides a dedicated support for any tablet of your choice, ensuring a versatile setup.

Key indicators on the unit include:

- 1 Battery status (remaining charge or charging)
- 2 Connection indicator (ANT+/Bluetooth)
- 3 Operating modes
- 4 LEV (levels)
- 5 ERG (ErgMode/power)
- 6 SIM (simulation)
- 7 Power indicator (in watts)
- 8 Virtual gear ratio (only in simulation mode)
- 9 Periodic brake calibration indication
- 10 Other service functions (zero sensor, shoe replacement, firmware update).
