MIA THERMO

MIA THERMO is Elite’s new thermal stainless steel bottle, ideal for sports and daily life.

Capacity	550 ^{ml}	
Diameter	73 ^{mm}	
Height	229 ^{mm}	
Weight	347 ^g	
Thermal properties	12 h with hot liquids, 24 h with cold ones	12/24 ^h

FEATURES

MATERIALS

Bottle entirely made of AISI 304 stainless steel.
Steel is an infinitely recyclable material,
that's why it's the most recycled worldwide.

STAINLESS STEEL

MIA THERMO is Elite's first bottle entirely made of stainless steel, from top to bottom.
Steel is an alloy that resists significant breaking loads and has the great advantage of being stainless and long-lasting. This means it's rustproof as it's inert compared to the substances it comes into contact with: water, supplements, detergents and drinks high in acidity such as fruit juices do not corrode it.

PLASTIC-FREE

MIA THERMO is Elite's first plastic-free range of bottles. Its manufacture involves no plastic material, not even for the cap. Beautiful, practical and easy to wash, steel bottles are a great investment for your hydration and an environmentally conscious choice: they are totally recyclable and can be used forever.

THERMAL PROPERTIES

This is all due to the Vacuum Technology the bottle is made in: MIA THERMO is made of two containers welded together, between which there are stringent vacuum conditions in order to create a thermal gap. The absence of air ensures the best possible thermal isolation for the liquids contained in the bottle, so the temperature maintains for longer.

STURDINESS AND DURABILITY

Bottle's steel and the specific modes it's manufactured ensure durability for a long time.

CAP WITH HOOK SO YOU CAN HOLD IT WITH ONE FINGER

MIA and MIA THERMO both come with a practical steel screw cap that ensures perfect air-tightness. The cap also features a steel wire to improve its portability, so you can use a single finger to carry it around and your hands are free to transport other objects, answer your cell or just walk unencumbered. The hook is inserted in the upper part of the cap and contours the neck of the bottle so it's held in position.

CLEAN & FRESH WATER FLOW

Unlike plastic materials used for traditional bottles, steel never alters the organoleptic properties of the liquid, so the original taste is maintained inside the bottle for even longer.

COMPATIBLE WITH ALL BOTTLECAGES

MIA and MIA THERMO are compatible with all commercially available bottlecages. The external bottle diameter, 73mm on its base, ensures a universal fit on any bottlecage.

Conversely, the upper bottle body is narrower (71 mm) so it's easier to insert and extract the bottle and it also looks more sophisticated.

AVAILABLE IN TWO COLOUR VARIANTS

The elegant and versatile external design of the MIA THERMO is available in two colour variants: black and silver, green and silver.

It's the ideal thermal bottle to match with the frame of your bicycle or bottlecage, or just carry around with you everyday, in your office, gym and so on.

HYGIENIC AND SAFE

Steel is a safe, hygienic and easy to clean material: just fill the bottle with hot water and a drop of neutral detergent, shake it and empty the bottle, rinse repeatedly and let it dry.

Totally BPA-free (bisphenol A), AISI 304 stainless steel is food safe according to current legislation (EC and FDA).
